Professional Summary

Back-End Developer specializing in .NET 10, ASP.NET Core Web APIs, and Clean Architecture. Built production-style projects including a local RAG document Q and A app, an Arabic RTL POS system, and an inventory management API with Identity and SMTP integration. Focused on secure, scalable backend solutions with practical AI integration.

Core Competencies and Technical Skills

- **Back-End and Desktop:** .NET (Core, 8 and 10), ASP.NET Core (Web API and MVC), WinForms, EF Core, LINQ.
- **Languages and Databases:** C#, SQL, Microsoft SQL Server, SQLite.
- **Architecture and Patterns:** Clean Architecture, SOLID, OOP, Dependency Injection (DI), Repository Pattern, Unit of Work, Specification Pattern.
- **Tools and Integrations:** Git, GitHub, Postman, AutoMapper, Swagger/OpenAPI, Visual Studio, SMTP.
- **AI and RAG:** Ollama, Embeddings, Vector Search, Cosine Similarity, LLMs, RAG Pipeline, AI Integration.

Projects

- **SmartDocQna** 2026
ASP.NET Core, RAG Pipeline, Ollama GitHub: github.com/Mariomedhat899/SmartDocQna
 - Project Overview: Built an ASP.NET Core document Q and A application with a local retrieval-augmented generation (RAG) pipeline.
 - RAG Implementation: Implemented end-to-end retrieval-augmented generation featuring PDF ingestion, paragraph-aware chunking, embedding generation, and cosine-similarity vector search.
 - Local LLM Integration: Integrated Ollama models (nomic-embed-text for embeddings, qwen2.5-coder:7b for chat) via raw HTTP client.
 - UI and Architecture: Built a responsive chat UI with real-time document loading and grounded answer generation, designed for local-first deployment with zero external API dependencies.
- **RoknaCafe-POS** 2026
.NET 10, WinForms, EF Core, SQLite, Clean Architecture GitHub: github.com/Mariomedhat899/RoknaCafe-POS
 - Built a complete cafe POS desktop app with Arabic RTL interface, real-time order building, and 80mm thermal receipt printing.
 - Implemented paid orders viewer with date filtering, daily totals, and item breakdown using ListView and MonthCalendar.
 - Structured the solution with Clean Architecture and Repository Pattern across Domain, Infrastructure, and UI layers.
 - Used EF Core with SQLite for data persistence, migrations, and seeding.
- **IMS-Backend** 2026
ASP.NET Core, EF Core, SQL Server, Identity, SMTP GitHub: github.com/Mariomedhat899/InventoryManagementAPI
 - Built a full-featured inventory management API with complete CRUD operations for Products and Categories, Transaction tracking, and Low Stock Alerts system.
 - Implemented secure authentication and role-based authorization using ASP.NET Core Identity with role seeder for admin and user roles.
 - Added CSV import/export functionality for bulk product operations and generated reports for data analysis and business insights.
 - Integrated SMTP email notifications via IEmailService and NotificationSettings to keep the business owner updated in real time.
 - Managed Payments Controller workflow with clean separation of concerns following Clean Architecture and Repository Pattern principles.
- **AiMemory** 2026
.NET 8, Web API, SQL Server, AI Integration GitHub: github.com/Mariomedhat899/AiMemory
 - Built .NET 8 API endpoints handling complex task domain logic and data relationships, following software coding best practices throughout.
 - Integrated AI features into the task workflow and optimized SQL Server queries to improve user productivity and data persistence performance.
 - Structured the solution using Clean Architecture to achieve testable, modular, and maintainable internal system components.

Education and Trainings

- **Full Stack Web Development Diploma**
Route IT Training

Sep 2024 – Nov 2025
Remote

Languages

- Arabic: Native / Bilingual Proficiency
- English: Professional Working Proficiency
